SPATIAL ASPECTS OF MORTALITY IN THE UNITED STATES

by

H. Preston Bissell, Ph.D.
J. Brady Foust, Ph.D.
Bodh Loomba, M.A., M.S.S.
Department of Geography
University of Wisconsin--Eau Claire
Eau Claire, Wisconsin

PREFACE

Although various studies on mortality are quite numerous in a variety of medical publications, the study of mortality from a geographic viewpoint is still underdeveloped. Only recently have articles dealing with this topic appeared in geographic journals.

This bibliography, although not intended as an exhaustive source, has been compiled to aid researchers concerned with recent publications dealing in any way with the spatial distribution of mortality within the United States. The sources cited herein are concerned almost entirely with mortality in the United States.

It should be noted that only a very small number of sources cited are intrinsically geographic in nature. Works dealing primarily with the spatial aspects of mortality are still relatively rare. The purpose of this bibliography is to bring this gap in the literature to the attention of serious researchers in the social sciences, particularly geography, in the hope that additional research may be done on this very important topic. It is hoped that future research may be more explicit in determining significant patterns of mortality within the United States.

I. General Studies

A. General Mortality
